

September 2006

**ZEROS announces another new Process
Another new Patent**

- **ZEROS POWER**
- **ZEROS AQUA-DYNAMICS**
- **ZEROS HYDRO-X**
- **ZEROS Bio-Fuels**

For over a decade ZEROS and its preceding technology has meant Bio-remediation and Bio-Hazardous remediation without incineration or atmospheric emissions. These processes have been known to the industry as ZEROS and ZEROS Bio-dynamics for cleaning oil spills and other type organic contamination.

The success of this Oxidation Process without atmospheric emissions or pollution has led the developers of ZEROS to apply the Oxidation process to the generation of power and purification of water using the ZEROS Process which means a complete sequestration of Carbon, Carbon Dioxide, Nitrous Oxides, Sulfurs, Mercury, Hydrocarbon particulates and other contaminates while producing power and purifying water. This process also allows the power generation industry and utilities fuel diversity such as using Bio-mass and Agricultural waste and scrap tires or coal waste to produce electricity with no adverse atmospheric emission and reducing the dependence on Hydrocarbon fuels.

ZEROS Crisis Response – A system to safely respond to a pandemic such as BSE or Avian Flu

ZEROS Power - A system configuration that allows the capture of 250% more BTU's per pound of fuel for power generation than is obtainable from incineration processes

ZEROS Aqua-dynamics - A system for making water and desalinating and purifying water at a rate of more than 20 million gallons per day using waste as fuel

ZEROS Hydro-X - A system of capturing Hydrogen gas as an alternate fuel from water purification without any of the emissions normally associated with hydrogen extraction

ZEROS Bio-Fuels A system utilizing ZEROS to turn Bio-mass into Bio-Diesel and Bio-Gasoline with no emissions. Instead of growing corn for ethanol, ZEROS allows the corn to be fed to cattle and then the manure to be converted into sulfur free diesel.
